The foreign search report submitted appears to be incomplete, please send the full original report. Priority is claimed to 6/9/2000.

5 The claims are directed to ~~the~~ membrane enclosed biocompartments ~~which~~ which reads on cells as well as organelles of cells.

10 The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

15 (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Zen.

20 Zen (EP 0 870 823 A1) entitled ~~the~~ System for Monitoring the Metabolic Activity of Living Cells ~~which~~ teaches in column 2 lines 37-45, an electrode type sensor for measuring pH. In column 6 lines 41-55, the determination can be repeated and it is possible to determine the variation of the basal metabolism of a cell
25 population induced by an external agent. In claim 7 lines 12-22, external agents added to the culture medium can be determined.

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

5 Claims 1-9 are rejected under 35 U.S.C. 102(a) as being anticipated by Lehmann.

 Lehmann (Biosensors & Bioelectronics) with a different inventive entity from the present application, teaches the present invention.

10 All the presently claimed features are taught by the above references for the same function as claimed. Note the claims are directed to ~~examining~~ and no further results are seen.

 Claims 1-9 are rejected under 35 U.S.C. § 112, second
15 paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Each of the following applies in all occurrences.

 The claims must be carefully rewritten in accordance with
20 standard US patent practice. For example, the method claims do not recite positive gerunds as method steps. ~~Made ready~~ is not a method step. Some of the subscripts as in 1(e) are not understood. The last step of claim 1 is incompatible with the preamble of the claim. ~~The said~~ is redundant. ~~Namely~~ is not
25 descriptive.

The following prior art pertinent to applicant's disclosure is made of record and not relied upon:

Liffmann (5,037,737) teaches sensors.

Pottgen (6,153,069) teaches sensors.

5 Sugihara (6,297,025) teaches sensors.

Al-Baldawi (J of Physiology) teaches measuring pH of organelles.

Ryback (Biophysical J) teaches determining buffer capacity of cells by measuring pH.
